□ Auto Immune Disorders

□ Blood Transfusion

 $\Box A$

 \Box B

 \Box C

□ Hepatitis

8. This history form has been read, understood and signed herein, and all of my questions in regard to my treatment have been answered satisfactorily. I am over 18 years of age, and if not have presented a parental name and authorization signature below to perform the treatment. I understand and have had explained to me proper home care treatment for my procedure. I understand that these procedures may produce some swelling, redness, itching, discomfort, numbness and adverse side effects. I understand that the treatment I have chosen is for cosmetic purposes only and no guarantees have been made to me concerning the results of the procedure. I understand that the results achieved, and number of treatments required will differ from person to person.

9. Please read the following statement carefully

Semi-permanent makeup is a two-part procedure. A healing period of a minimum 4 weeks is required before the second part i.e. the retouch session. Some clients may find the treatment slightly uncomfortable, although steps are taken to minimize this by anesthesia. Immediately after the treatment the pigment will be 30-50% darker but will start to fade after 1-2 weeks. With Some clients the pigment can disappear in some areas of the brow, but this is very normal, as your skin will reject some pigment, all will be rectified on the retouch session. Although extremely rare, there may be an immediate or delayed allergic reaction to pigment, so a patch test should be carried out. Infection can occur if aftercare instructions are not followed correctly. You may experience minor bleeding. If you have an MRI scan within 3 months after your procedure, you should notify/discuss this with your doctor. Possible scarring may occur, but it very rare.
